

URC-01

UNIQUE ROTARY, STRAIGHT and SINGLE LIPPER CUTTING MACHINE

RIGID and DURABLE

The 600 mm sensitive mechanical caliper with fine - adjustment ability used on it was preferred by reason of the fact that it is resistant against strokes and is long lasting.

With the purpose of enabling the machine bodies to be resistant against corrosions and strokes for years, it has been made of steel and its slide systems have been stoned in a sensitive way. By this means, life of the cutting edges has been prolonged and cutting precision has been increased.

FAST and PRECISE

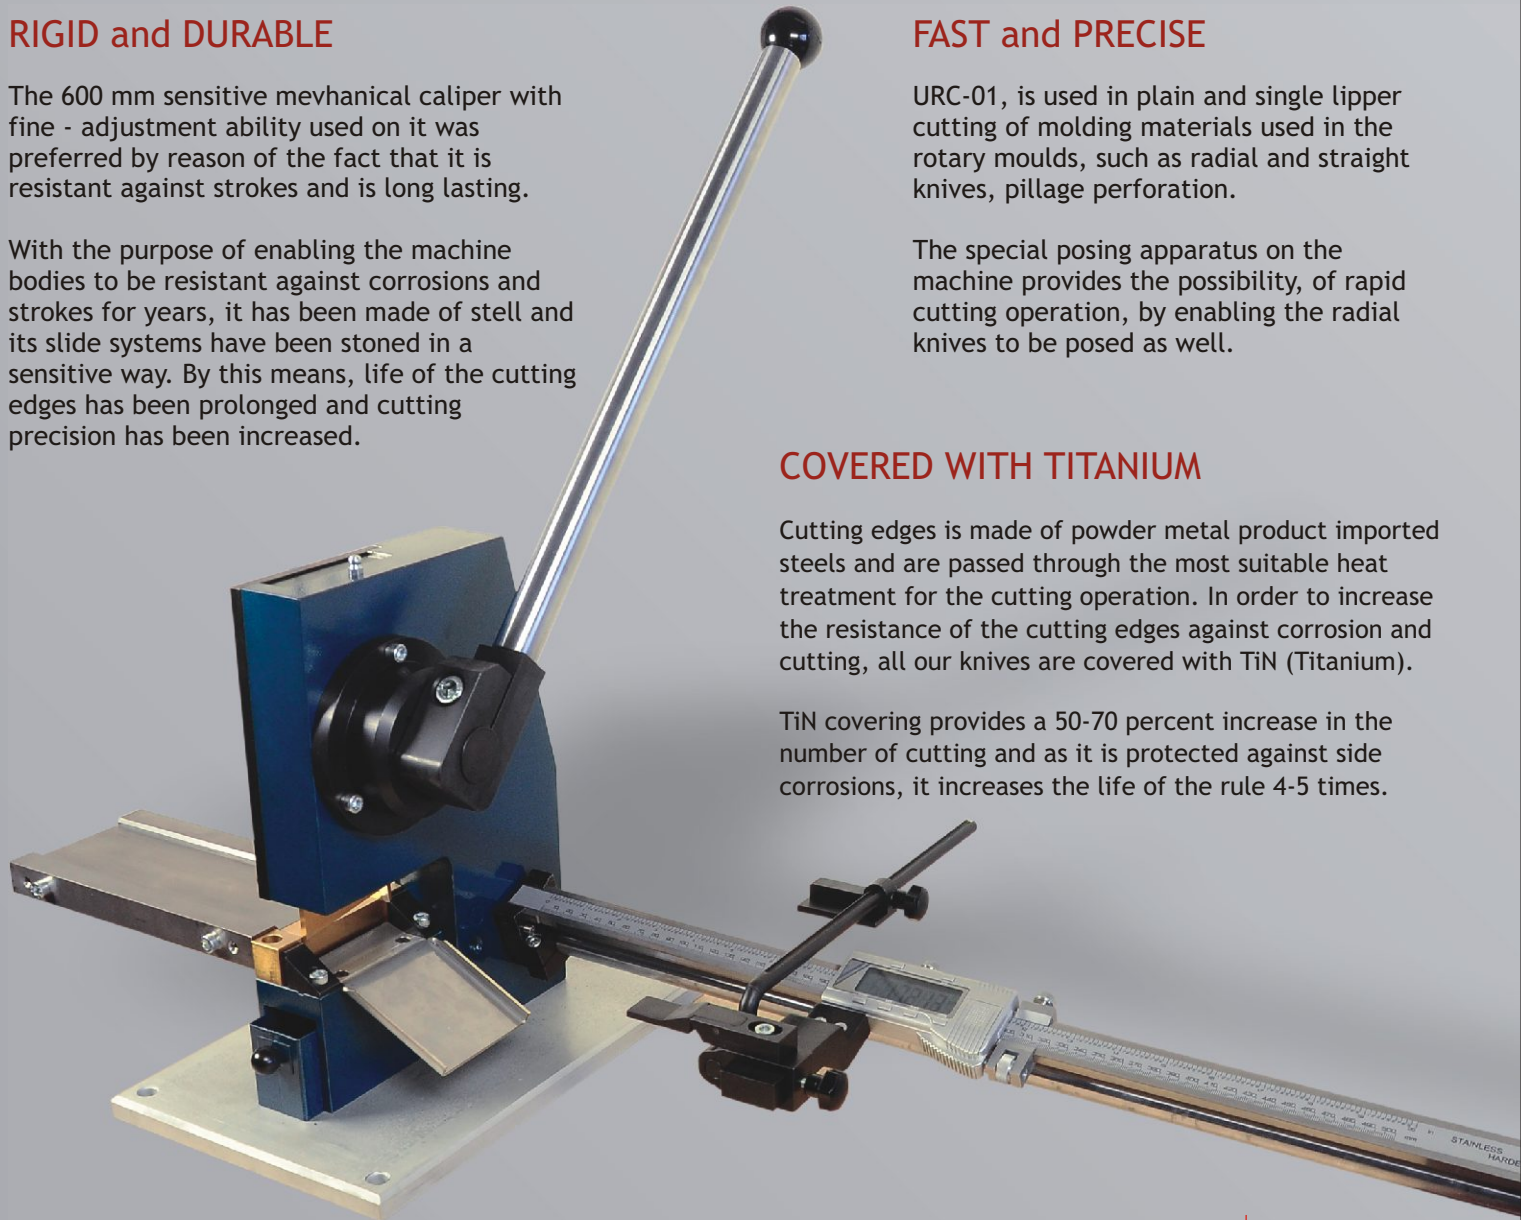

URC-01, is used in plain and single lipper cutting of molding materials used in the rotary moulds, such as radial and straight knives, pillage perforation.

The special posing apparatus on the machine provides the possibility, of rapid cutting operation, by enabling the radial knives to be posed as well.

COVERED WITH TITANIUM

Cutting edges is made of powder metal product imported steels and are passed through the most suitable heat treatment for the cutting operation. In order to increase the resistance of the cutting edges against corrosion and cutting, all our knives are covered with TiN (Titanium).

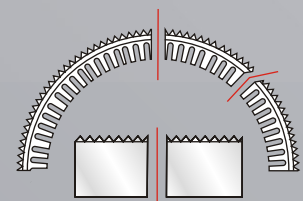

TiN covering provides a 50-70 percent increase in the number of cutting and as it is protected against side corrosions, it increases the life of the rule 4-5 times.

NO MORE CORROSION and RUSTING

All parts of the machine have been covered with CrN (chrome nitride) which is a special casing type that is resistant against corrosion and rusting for long years.

In all Unique eccentric systems, beddings are carried out by rollers and by this way, corrosion spaces are prevented which may occur in the course of time.

h: max 50 mm

The machine is guaranteed by our firm for a period of 1 year.
